

Keys to Success (90 Hours)

Get creative and practical skills that promote success. Learn to focus on content, take tests, and communicate ideas. Improve your time management and listening skills. Wrap it up with tips on living a successful life.

Mac OS X (78 Hours)

The latest operating system software available for Mac, this module offers fundamentals of using the program, working on the desktop, file and folder management, and creating and editing documents. Customize and organize your Mac, and maintain your "iLife".

Graphic Design Fundamentals (168 Hours)

Encompassing all the fundamental practices and principles needed to be a dynamic and successful Graphic Designer, this module provides information and exercises on color theory, typography, and design ideas past and present. Everything the modern designer needs to know.

Adobe Illustrator (148 Hours)

Illustrator is the premier tool for creating vector based drawings and illustrations, and this program is greatly important for logo design. Learn drawing and composing, patterns, effects, distort images, texture, gradients, symbols, graphs and transparencies. Prepare a document for pre-press and printing or for the web.

Adobe Photoshop (140 Hours)

This image-editing program allows manipulation of existing artwork or the creation of new masterpieces that can be integrated into any or all of the applications learned throughout the program.

Apple Computer systems are used for this program!

Adobe InDesign (132 Hours)

This page layout program is used by businesses, print shops and home-office professionals to create high-quality publications such as brochures and newsletters. Set up documents with frames and link graphics. Work with tabs, tables, and transparencies, or layout a book with a table of contents and an index. When you've mastered these techniques, prepare and package a document for printing.

Adobe Dreamweaver (200 Hours)

Macromedia Dreamweaver is the standard in authoring tools for managing websites and internet applications. Publish with ease, incorporate functionality into websites, create dynamic responses to user input. Dreamweaver does it all in a graphical user interface environment.

Adobe Flash (97 Hours)

Flash enhances web pages by adding exciting multimedia action such as animation and sound. In the final assignment, students create their own movie.

Final Cut Pro (148 Hours)

This program provides flexibility and features unparalleled for digital video on the personal computer. Far superior to any competing software for professional video editing, students build and prepare tracks, trim and refine edits, customize and capture footage. Lessons also include mixing audio, creating titles, adding transitions, applying filters, and outputting broadcast quality footage.

Fun, Entertaining, & Challenging

“ It was fun, entertaining and challenging all in one. The instructors were there whenever I needed them to lend a helping hand, or just to give an encouraging word. I would definitely recommend Mactech to anyone who is interested in getting an excellent education with the utmost in support, help, and friendship from the instructors and the operators who will help you with your application and deciding on the course which best suits you.”
